Software Engineer

Engineer

KEY RESPONSIBILITIES:

- Design and develop object-oriented software in C++ on a Linux environment for Automated Test Equipment instruments.
- Work with hardware, firmware, and other software engineers in defining requirements, planning, and executing project plans, design reviews, and supporting production release of modified or new products.
- Troubleshoot and fix problems in instrumentation software.

REQUIREMENTS:

- BS or MS degree in Computer Science or EE.
- Knowledge in all aspects of the software development, such as understanding complex software architecture, version control, builds, and unit testing.
- Experience in large and complex C++ projects, especially legacy code.
- Experience with embedded systems, hardware control, or instrument drivers.
- Strong C++ and Object-Oriented Programming skills.
- Comfortable in a Linux user space development environment.
- Must be proficient in English both oral and written.
